

Glass Repair System Comparison Chart

NOTE: The information contained in the following chart was compiled from published and printed information readily available to all prospective buyers from each named company, as well as from interviews with current and past users of each named system. Every attempt has been made to provide complete and unfiltered comparative information. Contradictory information or results, when supplied with substantiation (i.e., published in a credible, independent forum) will be updated immediately.

Please educate yourself on the uses, benefits and limitations of each system before considering purchase. Use the information provided AS A GUIDELINE ONLY. We have provided links to each company Web site and product demonstration videos posted by each manufacturer on public Web sites to provide the fairest and easiest access to all available information.

SPECIAL NOTE: There are no currently accepted performance standards or benchmarks in the Glass Repair Industry for flat glass damage repair, nor is there any official, independent forum for the testing or verification of repair processes or product performance. GlassRenu will continue its work to help establish industry standards and calls upon all glass repair tool manufacturers to join us in this effort. GlassRenu is prepared to participate in and fund, if necessary, an independent study to establish performance benchmarks and provide glass technicians with authoritative information for adequate product evaluation.

* Published Internet Prices as of 4/1/09

** Generally accepted performance in more than 90% of all repairs by type and depth of damage, including hard water, scratches, acid etching or debris removal commonly found in construction, maintenance accidents, graffiti or fabrication; whether from carbide scribes, metal implements, rocks, stucco, cement, sand or by other means. Depth measurements are approximate and for illustrative purposes only.

*** Repair time based on the estimates provided by the manufacturers in published materials or, in the absence of any published manufacturer estimates, the average estimated time provided in interviews by all current and former product users contacted.
